PROFESSIONAL SUMMARY

Full Stack Developer with production experience in healthcare systems, specializing in Laravel + Vue.js, RESTful API design, and third-party integrations. Built and maintained hospital-grade software serving real patient data at a government medical institution.

WORK EXPERIENCE

Information System Analyst — **San Fernando, Pampanga**
Jose B. Lingad General Memorial Hospital — *July 2025 – Present*

- Engineered key modules and database optimizations for a web-based Histopathology Laboratory Information System (LIS), enabling efficient tracking and management of **250 - 500** daily patient records across laboratory workflow stages and reducing manual processing time by approximately **70%**.
- Built a secure integration layer connecting internal EHR records with PhilHealth web services, accelerating claims validation and ensuring regulatory compliance.

ACADEMIC HISTORY

Holy Angel University — **Angeles City, Pampanga**
Bachelor of Science in Computer Science — *2021 – 2025*

- Magna Cum Laude
- Software Engineer Lead – Google Developer Student Club
- Vice President – League of Outstanding Programmer Club

TECHNICAL SKILLS

- **Frontend Development:** HTML5, CSS3 (TailwindCSS, PrimeVue), JavaScript, ReactJS, Vue.js, Angular, Nuxt.js
- **Backend Development:** PHP (Laravel), Python, Java, C++
- **Databases & CMS:** MySQL, MariaDB, Sanity CMS
- **Cloud & DevOps:** Git, AWS (Deployment & Infrastructure)
- **Tools & Design:** Figma, Canva, Microsoft Office

PROJECTS

Histopath Information System

- A production-grade laboratory management system currently live at Jose B. Lingad General Memorial Hospital, built to power the laboratory workflows and patient record tracking operations of the institution.
- Built a decoupled Vue.js Single-Page Application (SPA) with a stateless Laravel RESTful API and normalized MySQL/MariaDB schemas optimized for high-throughput laboratory data.

EHSM Scheduling (Appointment Scheduling for Hospital Employee Clinic)

- Internal clinic scheduling system for hospital employees, managing multi-doctor availability and real-time appointment booking.
- Implemented TailwindCSS-based UI with reactive state management and backend conflict-detection logic for real-time scheduling constraints.

Edify Philhealth Claims Application (Hospital System)

- Hospital-side claims submission system integrating with Bizbox System for transmission of PhilHealth electronic claims.
- Developed a secure transmission layer parsing internal database schemas into PhilHealth-required JSON/XML payloads for accurate claims submission.

CERTIFICATIONS

- **Getting Started with ReactJS Components** (Simplilearn) – 2024
- **Learn Advanced C++ Course Online** (Simplilearn) – 2025
- **Blockchain Certification Training** (Simplilearn) – 2025
- **What is Generative AI?** (LinkedIn) – 2025
